

CLAIMS

1. A document filing folder with at least two flaps (4, 5, 6) which has a cover formed by two sheets, anterior sheet (1) and posterior sheet (2), which are assembled together by binding (3), one (2) of the sheets having flap (4; 5) along at least one of its lower and upper edges and another flap (6) along its lateral edge, those being foldable down towards the interior of sheet (2) for storing documents (7) found in the folder, characterized by the fact that the documents consist of notebook pages (7) securely linked to binding (3) of the two sheets (1, 2) so as to allow pages (7) to be stored by folding them down successively, one on top of the other, on sheet (2) and under flaps (4, 5, 6) folded towards this sheet.

2. A filing folder according to Claim 1, characterized by the fact that sheet (2) with flaps (4, 5, 6) is the posterior sheet.

3. A filing folder according to Claim 1 or 2, characterized by the fact that binding (3) is of the spiral type, enabling notebook pages (7) to be stored flat over sheet (2) with flaps (4, 5, 6).

4. A filing folder according to any one of the preceding claims, characterized by the fact that it can be closed by at least one closing means consisting of rubber band (8) which is attached to anterior sheet (1) or posterior sheet (2) by rivets (10) or the like, sliding relative to the sheet through eyelets (9), and which can be turned down over at least one of the two corners of opposite sheet (1), or all in one piece over this sheet parallel to binding (3).

5. A filing folder according to any one of the preceding claims, characterized by the fact that anterior sheet (1) or posterior sheet (2) has three flaps (4, 5, 6), respectively along the lower and upper edges, and along the lateral edge of the leaf.
